air units (see Annex).

which Soviets said were shipped to

5. [REDACTED] the plant, although lacking modern equip-
ment (steel sheets had to be bent over logs), did an excel-
lent job. The oil preheaters were crude but well suited for
the requirements of field units.

25X1A

Comment:

The production of oil preheaters was previously reported. *
According to this information, the daily output in the Summer
of 1948 was about 30 units. The estimate of 50 units per day
for the Spring of 1947 seems to be exaggerated. On the other
hand, a work force of 350 men in one shift, as stated in the
report, seems to be too small with respect to the output and
previous estimates. The plant was being expanded or con-
verted in the Summer of 1948.
